

## HOMEWORK

### Enzyme Cleaner

By Jennifer Wagaman, eHow Contributor  
updated: July 01, 2010

#### Bahan

1. 300 grams of citrus scraps
2. 100 grams of brown sugar
3. 1 liter of water
4. 2-liter or larger plastic bottle
5. Marker

#### Prosedur

1. 300 g potongan jeruk ditempatkan dalam wadah (Place 300 grams of citrus scraps into the bottle. If they do not fit through the mouth of the bottle feel free to cut the scraps into smaller pieces)
2. Tambahkan 100 g gula coklat ke dalam botol (Add 100 grams of brown sugar to the citrus scraps).
3. Tuangkan 1 liter air bersih ke dalam botol kemudian tutup (Pour one liter of water into the bottle with the citrus scraps and brown sugar, then screw the cap onto the bottle).
4. Kocok campuran bahan hingga gula terlarut dan tercampur dengan rata yang memakan waktu sekitar 30-60" (Shake the bottle vigorously until the ingredients have mixed together well and all of the brown sugar has dissolved. This should take 30 seconds to a minute of shaking).
5. Buat keterangan waktu (hari & bulan) pembuatan bahan pada wadah (Write the day and month you put the mixture together somewhere on the bottle).
6. Simpan wadah pada tempat aman selama 3 bulan untuk mendapatkan hasil fermentasi yang baik (Let the solution sit for three months so that it can properly ferment)
7. Bahan kemudian sudah dapat digunakan (300 ml bahan + 1 liter air) dengan kualitas yang sama dengan yang dijual (then add half a cup of the mixture to a liter of water and use it as you would any store-bought household cleaner).
